

B. Create a simple Web API that returns Student data in JSON format.

CODE:

(Student.cs):

```
namespace Practical_8A.Models
{
    public class Student
    {
        public string RollNo { get; set; }
        public string Name { get; set; }
    }
}
```

(StudentController.cs):

```
using Microsoft.AspNetCore.Mvc;

namespace StudentPWA.Controllers
{
    [ApiController]
    [Route("api/[controller]")]
    public class StudentController : ControllerBase
    {
        [HttpGet]
        public IActionResult Get()
        {
            return Ok(new
            {
                RollNo = "T016",
                Name = "Himani"
            });
        }
    }
}
```

(Index.cshtml):

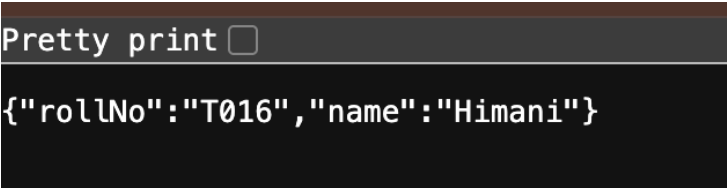

```
<h2>Student Record</h2>

<button onclick="loadStudent()">Load Student</button>

<p id="data"></p>

<script>function loadStudent() {
    fetch("/api/student")
    .then(response => response.json())
    .then(student => {
        document.getElementById("data").innerHTML =
            "Roll No : " + student.rollNo +
            "<br>Name : " + student.name;
    });
}</script>
```

OUTPUT:

```
Pretty print ☐
{"rollNo":"T016","name":"Himani"}
```
